The new version of the wallet will also include undersea switching, which allows BTC to pass from the Bitcoin blockchain to the payment channel network LN. For this novelty, Electrum is based on Boltz technology. Electrum will charge a commission for this service.

It's not hard to run your own Electrum server and point your wallet to just use it. This restores Electrum to the point where it has the same privacy and security attributes as the full node, where no one else can see the address or transaction that the wallet is interested in. Electrum then becomes an all-node wallet.

Electrum also integrates Lightning with hardware support. Because hardware wallets store bitcoins offline within the reach of hackers, they are considered one of the best ways to protect them.

Electrum 0.18.8 is available for details at [github](#).

Users of Bitcoin wallet Electrum are currently facing a phishing attack, according to the Devi Security Lab. Hackers broadcast messages to electrum clients through a malicious server, prompting the user to update to v4.0.0, and if the user follows the prompt to install the backdoor-carrying client, the private key is stolen and all digital assets are stolen. At the time of writing, at least 1,450 BTCs worth approximately \$11.6 million had been stolen from phishing attacks that forged Electrum upgrade alerts. Devi Security Labs hereby suggests that versions of Electrum below 3.3.4 are vulnerable to such phishing attacks, and users using Electrum Wallet are requested to update to the latest version of Electrum 3.3.8 via the official website ([electrum.org](#)), which has not yet been officially released v4.0.0, and do not use the link in the prompt message to avoid asset losses.

The Healthy Security Lab is concerned that Nearly 250 bitcoins have been stolen in a recent hacking attack on an Electrum wallet. This attack, confirmed by Electrum, involves creating a fake version of the wallet to trick users into providing password information. Electrum responded on Twitter that "this is an ongoing phishing attack on Electrum users and advised users to download wallet apps from the official website" and that The Healthy Security Lab advised users not to install an unknown source of Electrum wallets to avoid being tricked. Electrum wallets have been hacked in recent days and nearly 250 bitcoins have been stolen, according to blockchain security team Devi Security Labs. This attack, confirmed by Electrum, involves creating a fake version of the wallet to trick users into providing password information. Electrum responded on Twitter that "this is an ongoing phishing attack on Electrum users and advised users to download wallet apps from the official website." Mars Finance reminds users not to install electrum wallets from unknown sources. Qtum Electrum Tutorial Qtum Electrum Light Wallet.

Send the coin to another wallet for long-term bitcoin storage. There should be a full node behind the wallet, such as the Electrum node pointing to your own Electrum server. server to communicate. At this point, a limited number of electrum server nodes are mixed with the hacker's malicious nodes.

Hackers have launched a denial-of-service (DoS) attack on a well-known wallet Electrum server, according to [Johnwick.io](#). Hackers used a botnet of more than 140,000 computers to attack Electrum's nodes and simultaneously deployed malicious nodes. When the user connects to these malicious nodes and sends transactions using the older version of Electrum.

The `discoverdomain` function can be run by sending backdoor commands or automatically. `Discoverdomain` first enumerates the electrum Bitcoin wallet server using a public list, and then tries to query history with a hard-coded hash.

The Small Zero Coin item has a

n official wallet with a graphical interface, which is the best choice because it has built-in coin and fee features. There's also a lightweight Electrum wallet.

The Electrum team has also been developing other features. Electrum Wallet users can view the full release notes [here](#).

Users of Bitcoin wallet Electrum are facing a phishing attack, according to the Dev Security Lab. Hackers broadcast messages to the Electrum client through a malicious server, prompting the user to update to v4.0.0, and if the user follows the prompt to install this "backdoor-carrying client", the private key is stolen and all digital assets are stolen. At the time of writing, at least 1,450 BTCs (stolen by one user, antimalware firm Malwarebytes and Electrum) had been stolen in phishing attacks that faked Theelectrum upgrade tips, with a total value of about \$11.6 million. It is worth mentioning that less than version 3.3.4 of Electrum is vulnerable to such phishing attacks, users using electrum wallets are requested to update to the latest version of Electrum 3.3.8 via the official website (electrum.org), which has not yet been officially released v4.0.0, please do not use the link in the prompt message to update to avoid loss of assets.

Index servers are mostly difficult to install and run in production environments, such as Insight servers that need to reset APIs for certain types of data, followed by WebSockets and socket.io. In addition, the Stratum API used by the Electrum server is too cumbersome and cumbersome.

Qtum Electrum Light Wallet fixes a number of stability vulnerabilities, see [github](#) for details.

According to the Dimensionality Reduction Security Lab, users of Bitcoin wallet Electrum are currently facing phishing attacks. The hacker broadcasts a message to the Electrum client through the malicious server, prompting the user to update to v4.0.0. If the user installs this "backdoor client" as prompted, the private key will be stolen, and all digital assets

According to slow fog zone news, Electrum fake upgrade tips of the phishing attack has stolen at least 200 BTC, this attack by upgrading Electrum alone can not be avoided, the need for the entire ecological service to make corresponding changes (because Electrum this client is not a full node, and then on the transaction broadcast and the corresponding service side of the message communication, attackers can also deploy malicious server). Slow fog zones remind users that phishing attacks like Electrum require long-term vigilance. The slow fog zone has previously issued an alert for selectrum phishing updates, and hackers who attacked Electrum wallets used Electrum's software to unusually construct malicious software update prompts to induce users to update and download malware usage.

In December 2018, for the first time, we discovered and alerted an attacker to a messaging flaw that exploited the Electrum Wallet client to force an "update prompt" to pop up when a user transfers money, inducing the user to update the download malware and then carry out a currency theft attack. This "update tip" is not an official act of Electrum, but a phishing attack by an attacker that exploits a message flaw on the Electrum client and the ElectrumX server, which requires the attacker to deploy the malicious ElectrumX server in advance, and the malicious server is localized by the user's Electrum client (because the Electrum client is a light wallet and the user needs the ElectrumX server to broadcast the transaction). At the time of the madness, malicious ElectrumX servers accounted for as many as 71% of the total, and the show doesn't fully count that hundreds of bitcoins have been stolen in this phishing attack over the past year or so. Although in early

2019 Electrum officials said they would adopt some security mechanisms to prevent this kind of "update fishing", such as: 1. Patch Electrum client does not display rich text, does not allow arbitrary messages, only strict messages; Patch ElectrumX server implementation detects Sybil Attack (i.e. witch attacks, malicious servers that send phishing messages) and no longer broadcasts them to clients; Implement blacklisting logic to alert malicious servers outside the Electrum client view; Promote social networking sites, websites, and all forms of communication that exist with users, who should always run the latest version and always only install from official sources (electrum.org), access through security protocols (https), and verify GPG signatures in advance. However, many users of Electrum are still in the older version (less than 3.3.4), and the older version is still under threat. However, we do not rule out a similar threat to the new version. Recently, slow fog technology anti-money laundering (AML) system through continuous tracking found that one of the attackers wallet address bc1qcygs9dl4ppqw6atc4yqurzd76p3r9cp6xp2kny has stolen more than 30 BTC, the crime lasted six months, and recently is still active. We would like to remind Electrum users that the new version of Electrum in this Update Tip is likely to be false and that if installed, transfer Bitcoin out in another security environment in a timely manner. At the same time, we call on the vast number of cryptocurrencies exchanges, wallets and other platforms of the AML wind control system black and monitor such as the above Bitcoin address. Finally, identify electrum's official web address.

While advanced settings may discourage users of some personal servers, Esplora is the best choice for users who want to set up both a personal Electrum server and a personal block browser. By bundling the two together, Esplora can save users a lot of time setting up servers and blockchain browsers, respectively.

Electrum - Lightweight Bitcoin client.

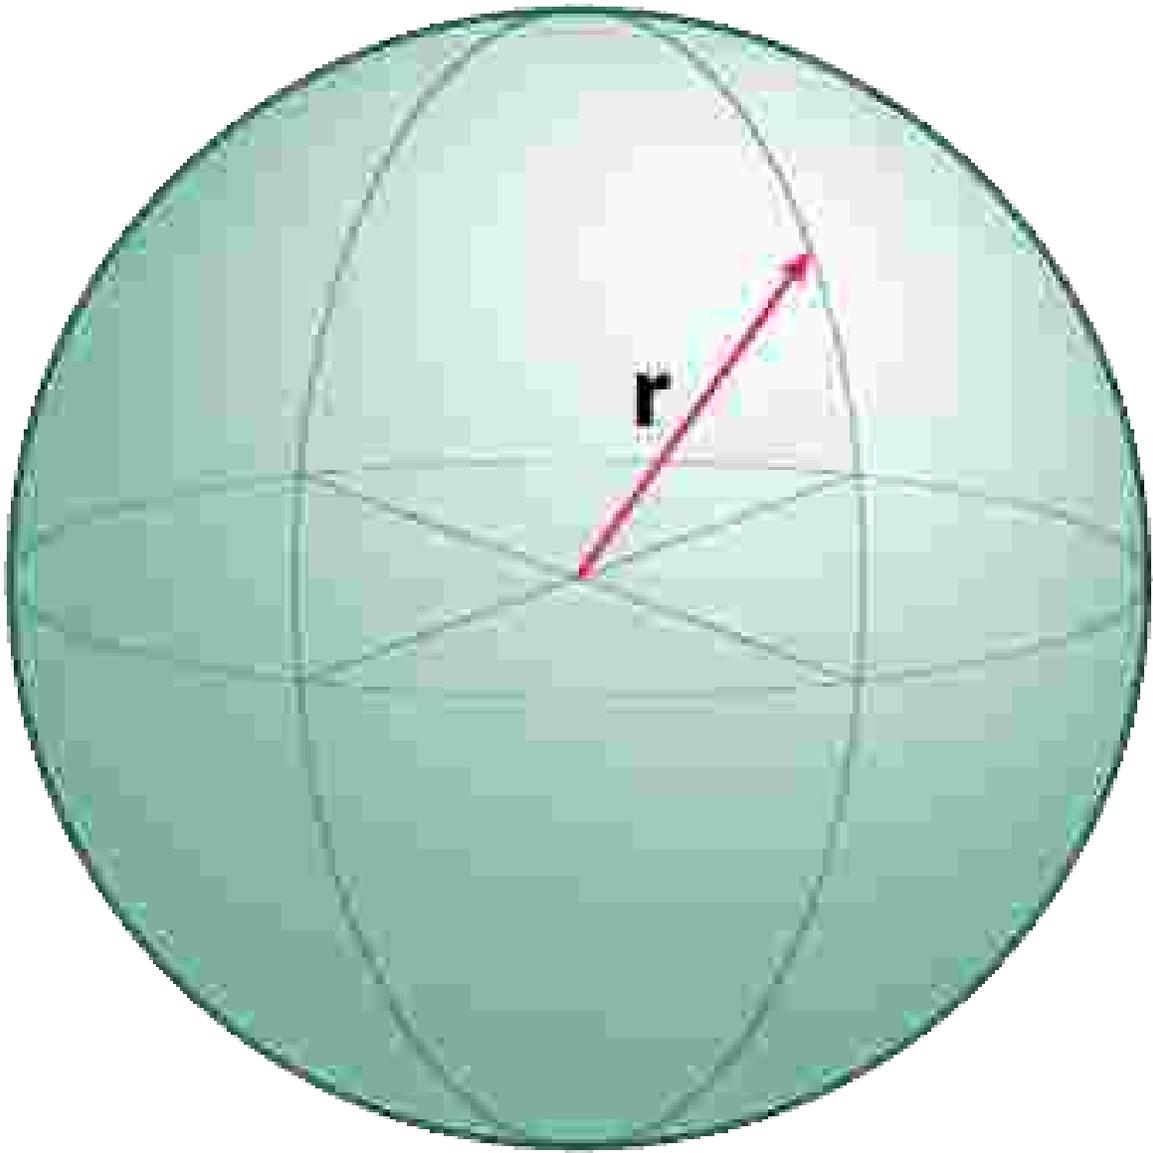

rpc-endpoint this parameter sets the address and settings of our local API server to provide data to clients, and the default setting is 127.0.0.1:8090.

\$dir - "\$homedir/.electrum/wallets"

In May, IBM X-Force Incident Response Intelligence Services (IRIS) researchers discovered an online server for the Iranian hacking group APT 35 (Hollywood Kitten, Ptlous, or ITG18), a virtual private cloud server that was exposed to the Internet due to misconfiguration of security settings. There are multiple APT 35 domain names on the server that hold more than 40GB of data.

Hackers have launched a denial-of-service (DoS) attack on a well-known wallet Electrum server, according to Johnwick.io. Hackers used a botnet of more than 140,000 computers to attack Electrum's nodes and simultaneously deployed malicious nodes. When a user connects to these malicious nodes and sends a transaction using an older version of Electrum, the user is prompted to update the Backdoor Client. If the user installs the client as prompted, the private key is stolen and all digital assets are lost. Millions of dollars of digital currency have been stolen, according to Electrum officials. Devi Security Labs recommends that users of Electrum Wallet update to the latest version of the client via the official website and never use the link in the prompt message.

Electrum is free software used by many cryptocurrencies websites, including merchants and exchanges, to store bitcoins. Anyone can run an Electrum server, and the software supports hardware wallets such as Trezor, Ledger, and Keepkey. Enhanced features include multi-sig and the ability to sign transactions using cold storage devices that are not connected to the network.

FRANKLIN MUTUAL BEACON FUND**Asset Class**

Equity Fund

Base Currency

US dollar (USD)

Investment Objectives

The Fund's primary investment objective is capital appreciation. A secondary objective is income.

Investment Policy

The Fund pursues its objectives principally through investments in common stock, preferred stock, and debt securities convertible or expected to be convertible into common or preferred stock. No more than 20% of the Fund's net assets will generally be invested in securities of non-US issuers. The opinions of the Investment Manager are based upon analysis and research, taking into account, among other factors, the relationship of book value (after taking into account accounting differences among countries) to market value, cash flow, multiple of earnings of comparable securities, creditworthiness of issuers, as well as the value of collateral securing a debt obligation, with the objective of purchasing equity and debt securities at below their intrinsic value.

The Fund may also seek to invest in the securities of companies involved in mergers, consolidations, liquidations and reorganisations or as to which there exist tender or exchange offers, and may participate in such transactions. To a lesser extent, the Fund may also purchase debt securities, both secured and unsecured, of companies involved in reorganisation or financial restructuring, including low-rated and non-investment grade securities.

The Investment Manager may take a temporary defensive cash position when it believes the securities trading markets or the economies of countries where the Fund invests are experiencing excessive volatility or prolonged general decline or other adverse conditions.

The Fund may invest in financial derivative instruments, which may include, but are not limited to, futures, options, contracts for difference, forward contracts on financial instruments and options on such contracts, swaps such as credit default swaps, synthetic equity swaps or total return swaps. The Fund may, through the use of financial derivative instruments, hold covered short positions provided that the long positions held by the Fund are sufficiently liquid to cover, at any time, its obligations resulting from its short positions.

Investor Profile

Considering the investment objectives, as stated above, the Fund may appeal to Investors looking to:

- capital appreciation and to a lesser extent income by investing in undervalued companies based primarily in the US
- invest for the medium to long term

4) decline to accept the vote of any Prohibited Person at any meeting of shareholders of the Company.

Listing of Shares

Certain eligible Share Classes are or will be listed on the Luxembourg Stock Exchange. The Board of Directors may decide to make an application to list the Shares of any Class on any other recognised stock exchange.

Form and Currency of Shares

All Shares are issued in registered form. Fractional registered shares will be rounded to three (3) decimal places. Any deal order with a stated Share amount with more than three (3) decimal places will be rounded to three (3) decimal places, using conventional rounding to the nearest thousandths place.

The Board of Directors has resolved that no additional Shares in physical bearer form will be issued. The provisions set forth in this Prospectus in relation to Physical Bearer Shares are applicable as long as Physical Bearer Shares are in issue.

The Company may offer within a Fund several Alternative Currency Share Classes as described in Section "Share Classes".

Dealing Cut-Off Times

Dealing Cut-Off Times are detailed in Appendix A. The Board of Directors may permit, if it deems it appropriate, different Dealing Cut-Off Times to be agreed with local distributors or for distribution in jurisdictions where the different time zone so justifies. In such circumstances, the applicable Dealing Cut-Off Time applied must always precede the time when the applicable Net Asset Value is calculated and published. Such different Dealing Cut-Off Times shall be disclosed in the local supplement to this Prospectus, the agreements in place with the local distributors, or other marketing material used in the jurisdictions concerned.

Calculation of Share Prices/Net Asset Value

The prices at which Shares of the relevant Classes can be purchased, sold or switched in each Share Class are calculated on each Valuation Day by reference to the Net Asset Value per Share of the Class concerned and are available on the following Business Day.

Some jurisdictions do not permit Investor transactions to be accepted during local holidays. Details of these arrangements are contained in the locally approved version of this Prospectus.

Details of the calculation of the Net Asset Value are provided in Appendix D. Instructions received in writing by the Company in Luxembourg or by a duly authorised distributor, prior to the applicable Dealing Cut-Off Time on any Dealing Day, will be dealt with at the relevant Net Asset Value per Share determined for that Valuation Day.

All deal instructions shall be dealt with on an unknown Net Asset Value basis before the determination of the Net Asset Value per Share for that Valuation Day.

Suspension of dealing and Share Prices/Net Asset Value

The calculation of the Net Asset Value (and consequently purchases, sales and switches) of any Share of any Fund may be suspended by the Company pursuant to the power reserved to it by its Articles and as described in Appendix D. Instructions made or pending during such suspension may be withdrawn by notice in writing received by the Company prior to the end of such suspension. Unless withdrawn, instructions will be considered as if received on the first Valuation Day following the end of the suspension.

Fund Liquidations and Fund Mergers

If the net assets of any Fund is at any time below USD 20 million, or the equivalent thereof in the currency of the relevant Fund, the Board of Directors may decide to liquidate such Fund and redeem all outstanding Shares
